Type: Request For Qualifications (RFQS)
Project Solicitation Number: RFQS 6100 CLMP375
Description: 2024 Localized Flood Analysis Rotation List
Summary: The mission of the Watershed Protection Department (WPD) is to reduce the impact of flooding, erosion, and water pollution on our community in order to protect lives, property, and the environment. The purpose of program to be implemented under this rotation list is to identify and map localized flood risks throughout the city, develop models for use in the evaluation and design of storm drainage systems, and develop data that can be used to equitably prioritize localized flood problem areas and projects. A key component of this effort will be the update of existing and development of new 1D and 2D models based on current drainage criteria and data for the existing storm drain system and development of new 1D and 2D models for previously unstudied storm drain systems. The WPD anticipates that a number of storm drain-related Capital Improvement Projects (CIP) and in-house/small projects will directly benefit from the proposed modeling program. The modeling also will provide information for a risk-based prioritization of localized flood risk reduction projects rather than reliance on the drainage complaint-based approach that has been used. Additionally, this rotation list will include support services for Quality Assurance/Quality Control and technical assistance tasks related to storm drain system and localized flooding analysis and modeling.

Type: Invitation For Bids (IFB)
Solicitation Number: IFB 6100 CLMC1050
Description: Hillspring and Scottsdale Water and Wastewater Pipeline Rene
Summary: Replacement of approximately 828 LF of water and 855 LF of wastewater pipelines including associated appurtenances on Scottsdale Road and Hillspring Circle between Heflin Lane and E Martin Luther King Jr Blvd. The existing 8-inch concrete wastewater lines will be replaced with 8-inch PVC. The existing 6-inch CI water pipeline is proposed to be replaced and upgraded to an 8-inch PVC pipe. The project includes upgrading existing storm sewer drainage pipes to mitigate localized flooding.

Type: Invitation For Bids (IFB)**Project Solicitation Number:** IFB 6100 CLMC1061**Description:** NWLS Improvements: Rock Harbor Force Main and Four Points #2

Summary: Approximately 3700 linear feet of new force main for the Rock Harbor lift station will tie into the existing Four Points #2 force main that will be repurposed to allow Rock Harbor to bypass the Four Points #2 lift station. The capacity of the Rock Harbor force main will be increased with the re-route. The force main from Four Points #1 lift station will be re-routed to discharge at Rock Harbor Lift Station using the existing Rock Harbor force main, thus bypassing the Four Points #2 Lift Station. The Four Points #2 lift station and a portion of the force main will be abandoned with this project. --- NWLS Study Items Identified: o Abandon the Four Points #2 LS o Reroute Four Points #1 LS flow from Four Points #2 LS to Rock Harbour LS o Construct 3700 LF of 16" forcemain from Rock Harbour LS to Four Points #2 Forcemain
